

Scope of Works

Design, Development and Implementation of the Department of Energy Website (energy.bm)

1. Project Overview

The Department of Energy seeks the design, development, implementation, and maintenance of a modern, secure, accessible, and scalable website under the domain energy.bm.

The website will serve as Bermuda's authoritative online source for information relating to the Department's areas of responsibility, including energy, telecommunications, space, satellite, earth observation, emerging technologies, policies, legislation, consultations, programmes, projects, educational resources, renewable energy data, geospatial energy information, and related public services .

The platform is intended to support the Government's energy transition, digital infrastructure, telecommunications development, space and satellite sector growth, regulatory transparency, public education , investor engagement, and innovation. It should provide a centralized digital hub for residents, businesses, educators, students, investors, policymakers, and industry stakeholders, and international partners.

The website should communicate the Department's work, increase public awareness, showcase progress towards national policy objectives, provide access to official documents and consultation materials, and support digital services.

2. Project Objectives

The primary objective of the website is to establish a comprehensive public-facing platform that promotes transparency, public engagement, education, innovation, investment readiness, and data-driven decision-making within Bermuda's energy sector, telecommunications, space and satellite sectors.

The website should provide easy access to legislation, policies, consultation documents, reports, guidance materials, datasets, and public information, while showcasing Government initiatives, renewable energy projects, telecommunications policy, space and satellite opportunities, emerging technologies, and Bermuda's progress toward a sustainable and resilient future.

The platform should support future digital services and provide the technical foundation for expanding online offerings over time.

3. Website Structure and Content

The website shall include clear and accessible information architecture that allows users to navigate between the Department's main areas of responsibility, including:

- Home
- About the Department
- Energy
- Electronic Communications
- Space and Satellite
- Policies, Legislation and Publications
- Consultations
- Education and Public Awareness
- Data, Dashboards and GIS
- News and Media
- Contact

The homepage shall provide visitors with a clear overview of the Department's priorities, current initiatives, and latest developments.

The homepage should feature dynamic content highlighting major projects, policy announcements, consultations, educational campaigns, key performance indicators, renewable energy deployment statistics, space and satellite sector updates, telecommunication updates, and major Government initiatives.

An "About the Department" section shall provide information regarding the Department's mandate, mission, strategic objectives, organizational structure, and contact information. This section should help the public understand the Department's role in developing and implementing Bermuda's energy, telecommunications, space and satellite policies and programmes.

4. Policies, Legislation, Publications and Consultations and Progress Tracker

A dedicated Policies, Legislation and Publications section shall serve as a searchable repository for legislation, regulations, policy documents, consultation papers, strategies, research studies, annual reports, public notices, guidance notes, and other official publications.

Particular emphasis should be placed on providing public access to documents such as the National Electricity Sector Policy, the EVolve Policy, the National Electric Vehicle Charging Infrastructure Policy, Integrated Resource Plans, Fuels Act 2022, National Fuels Policy, and other strategic energy documents.

This section shall include, but not limited to:

- National Electricity Sector Policy
- Evolve policy
- National Electric Vehicle Charging Infrastructure Policy
- Integrated Resource Plans

- Fuels Act 2022
- National Fuels policy
- Regulatory Authority Act 2011
- Electricity Act 2016
- Electricity (innovative licence) Regulations 2023
- Electronic Communications Act 2011
- Broadcasting Commissioners Act 1953
- Telecommunications Act 1986
- National Space Strategy 2020-2025
- Space and Satellite consultation documents
- Relevant guidance relating to satellite filings, earth stations, space insurance, space sector development, and international coordination.
- Energy guides, factsheets, and consumer education materials

The website shall include a dedicated Consultation area where active, upcoming, and closed consultation documents can be published. Consultation pages should include:

- Consultation title
- Summary of issue
- Opening and closing dates
- Downloadable consultation document
- Supporting documents
- Submission instructions
- Contact information
- Final decision or outcome document, where applicable

The Space and Satellite consultation document shall be uploaded to the website and linked from both the Space and Satellite section and the Consultations / Publications section.

Policy and Legislation Progress Tracker

The website shall include a Policy and Legislation Progress Tracker to provide the public and stakeholders with clear, up-to-date information on the development, consultation, approval, implementation, completion, commencement and closure status of major policies, strategies, Bills, regulations, consultation documents, guidance notes and other legislative or policy initiatives.

The tracker shall allow users to view the status of each item and understand where it sits in the relevant policy or legislative process.

The tracker should include, at minimum, the following fields:

- Title of policy, strategy, Bill, regulation, consultation, guidance note or publication
- Subject area, such as Energy, Telecommunications, Space and Satellite, Renewable Energy, Fuels, Electricity or Consumer Education
- Type of item, such as Policy, Strategy, Bill, Regulation, Consultation Paper, Guidance Note, Report or Public Notice
- Current status
- Current stage

- Date initiated
- Date published for consultation, where applicable
- Consultation closing date, where applicable
- Date consultation completed, where applicable
- Date approved, where applicable
- Date tabled, where applicable
- Date passed, where applicable
- Date assented to, where applicable
- Date commenced, where applicable
- Date completed or closed, where applicable
- Responsible Ministry, Department, agency or regulatory body
- Summary of purpose
- Key milestones
- Next anticipated step
- Downloadable documents
- Related legislation, policy, consultation or supporting materials
- Last updated date

The tracker shall be capable of showing different stages for policy development and legislative development.

For **policy, strategy and consultation documents**, the progress stages may include:

1. Concept / Scoping
2. Research and Policy Development
3. Internal Review
4. Ministerial Review
5. Public Consultation
6. Consultation Closed
7. Review of Submissions
8. Final Policy Development
9. Approved
10. Published
11. Implementation in Progress
12. Completed
13. Archived / Superseded

For **Bills, Acts, regulations and legislative amendments**, the progress stages may include:

1. Policy Proposal
2. Public Consultation, where applicable
3. Approved for Introduction or Publication
4. Tabled / Introduced
5. Parliamentary Process
6. Passed
7. Assent
8. Commencement
9. In Force
10. Completed
11. Archived / Superseded

The tracker shall be designed so that authorized Department staff can update each item through the content management system without requiring technical assistance.

The tracker should allow users to filter and search by:

- Sector
- Type of document
- Status
- Stage
- Year
- Active consultations
- Completed consultations
- Approved policies
- Legislation in progress
- Legislation in force
- Archived or superseded documents

The tracker should use clear public-facing labels such as:

- In Development
- Open for Consultation
- Consultation Closed
- Under Review
- Approved
- Published
- Tabled
- Passed
- In Force
- Implementation in Progress
- Completed
- Superseded

The website shall clearly distinguish between items that are still under development, items that have been approved, items that have been completed, and items that are legally in force.

The tracker shall also support future expansion to allow automated alerts, subscription updates, consultation reminders, stakeholder notifications and public engagement tools.

5. Energy Section

The website shall include a dedicated Energy section that provides clear information on Bermuda's energy policies, programmes, legislation, projects, consumer resources, and transition objectives.

This section shall explain the role of the Department in:

- Reducing reliance on fossil fuel imports while balancing security, sustainability and affordability
- Supporting the development of renewable energy

- Providing education, advice and guidance on energy policy and regulation
- Supporting the development and maintenance of robust energy infrastructure
- Promoting energy efficiency, conservation and consumer awareness
- Supporting affordability, sustainability and resilience in Bermuda's energy sector

The Energy section should include information on:

- Renewable energy
- Energy efficiency
- Electricity policy
- Fuels policy
- Energy transition initiatives
- Electric vehicles and charging infrastructure
- Public sector energy projects
- Consumer energy guides
- Solar photovoltaic guidance
- Solar water heaters
- Energy-efficient appliances
- Space heaters
- Air conditioners
- Lighting
- Water heaters
- Washing machines and dryers
- Vehicles
- Micro-wind turbines
- Registered Solar PV Installers

The website should include a page for the **List of Registered Solar PV Installers**, including, where applicable:

- BE Solar
- Sunnyside Solar
- AES Solar
- Greenlight Energy
- BAC Group / Bermuda Alternative Energy

The content management system shall allow the Department to update the list of registered installers as required.

6. Electronic Communications Section

The website shall include a dedicated Electronic Communications section to provide information on Bermuda's telecommunications policy, legislation, public guidance, sector development, and relevant regulatory matters.

This section should include links to relevant legislation and policy materials, including the Electronic Communications Act 2011, Telecommunications Act 1986, Broadcasting Commissioners Act 1953, and other applicable documents.

The section should be structured to support future expansion of telecommunications-related information, including public notices, consultations, consumer education materials, infrastructure information, and sector updates.

7. Space and Satellite Section

The website shall include a dedicated **Space and Satellite** section that positions Bermuda as a strategic jurisdiction for space, satellite, earth station, satellite filing, space insurance, earth observation, and related commercial opportunities.

This section shall be both public-facing and investor-facing. It should present Bermuda as a gateway to the global space economy and explain the country's value proposition in a clear, professional and accessible manner.

The Space and Satellite section shall provide information on:

- Bermuda's strategic mid-Atlantic location
- Opportunities for earth stations and satellite communications
- Support for space launch monitoring and oceanic tracking
- Satellite filing processes, including International Telecommunication Union filing information
- Coordination with relevant international regulatory bodies
- The role of the United Kingdom's outer space legislative framework as extended to Bermuda
- Bermuda's insurance and reinsurance market and its relevance to space-related risks
- The use of Bermuda corporate structures, including limited liability companies, for space and satellite ventures
- Bermuda's partnerships and history of collaboration with international space organizations
- Opportunities for investors, operators, insurers, researchers, educators, and technology providers

The Space and Satellite section shall include, at minimum, the following pages or content areas:

A. Overview: Bermuda and the Global Space Economy

This page shall introduce Bermuda as a gateway to the global space economy and provide a high-level explanation of why Bermuda is well positioned for space and satellite sector development.

B. Why Choose Bermuda

This page shall summarize Bermuda's strategic location, regulatory environment, financial services ecosystem, insurance expertise, international partnerships, and innovation-friendly business environment.

The page should address:

- Strategic location in the mid-Atlantic
- Suitability for monitoring space launches, satellite communication and oceanic tracking
- Earth station opportunities
- Bermuda's regulatory environment
- Satellite filing support
- Bermuda's financial services and insurance market
- Bermuda's experience supporting international space-related activity

C. Earth Stations and Satellite Operations

This page shall provide information on opportunities for establishing earth stations and supporting satellite communications, launch monitoring, oceanic tracking, maritime services, aviation services, and global communication networks.

D. Satellite Filing and Regulatory Guidance

This page shall provide clear, plain-language information on Bermuda's satellite filing process, applicable administrative fees, international coordination requirements, relevant regulatory bodies, and points of contact.

The page should explain that Bermuda's satellite filing process is intended to be efficient, transparent and compliant with applicable international requirements.

E. Space Insurance

This page shall explain Bermuda's role as a leading insurance and reinsurance jurisdiction and identify opportunities for space-related insurance products, including coverage for satellites, launches, space assets, and related risks.

F. National Space Strategy and Consultation Documents

This page shall provide access to Bermuda's National Space Strategy, space and satellite consultation documents, related policy papers, public notices, and any future consultation materials.

The Space and Satellite consultation document shall also be included in the Policies, Legislation and Publications section and in the dedicated Consultations section.

G. Space Camps, STEM Education and Workforce Pathways

This page shall provide information on space camps, STEM education, student programmes, workshops, small satellite programmes, microgravity experiments, and workforce development opportunities.

To avoid duplication, detailed student and public education resources should be cross-linked to the Education Centre rather than repeated in full across multiple sections.

H. Contact and Sector Enquiries

The Space and Satellite section shall include clear contact information or an enquiry form for businesses, investors, educators, researchers, and members of the public seeking further information.

8. Energy Projects and Government Initiatives

A key component of the website shall be a dedicated section showcasing the Government's energy projects and initiatives.

This area should provide detailed information on both current and completed projects, including project objectives, implementation timelines, milestones, outcomes, and supporting documentation.

The platform should prominently feature initiatives such as:

- Bermuda Housing Corporation Community Solar Programme
- Government Solar Development Project
- Public Sector Solar Programme
- Department of Public Transportation Electrification Programme
- Public Sector Energy Efficiency Initiatives
- Renewable Energy Developments
- Battery Energy Storage Projects
- Electric Vehicle Infrastructure Programmes
- Community Energy Initiatives

The website should allow the Department to publish project updates, photographs, videos, progress reports, and other content that demonstrates Bermuda's progress towards its energy goals.

9. News, Communications and Public Engagement

The website shall include a comprehensive News and Media Centre that enables the Department to communicate regularly with the public.

This section should support the publication of:

- News articles
- Press releases
- Ministerial statements
- Public notices
- Consultation announcements
- Event information
- Project updates
- Public awareness campaigns

The content management system should allow authorized Department personnel to easily create, edit, and publish content without requiring technical assistance.

The website should also be designed to accommodate future enhancements such as newsletter subscriptions, public surveys, stakeholder engagement tools, webinars, and social media integration.

10. Renewable Energy and Energy Transition Dashboards

The website shall incorporate interactive dashboards that communicate Bermuda's progress in renewable energy deployment and energy sector transformation.

These dashboards should present relevant statistics, trends, and visualizations in a format that is accessible to both technical and non-technical audiences.

The Renewable Energy Dashboard should provide information relating to:

- Distributed Generation systems
- Independent Power Producer projects
- Installed renewable energy capacity
- Solar generation estimates
- Battery energy storage deployment
- Renewable energy penetration levels
- Renewable energy deployment trends

The platform shall incorporate data from Government agencies, regulatory bodies, utilities, and other authorized sources to provide a centralized view of renewable energy deployment throughout Bermuda.

A separate Energy Transition Dashboard should provide a high-level overview of national energy objectives and progress indicators, including:

- Renewable energy penetration
- Electric vehicle adoption
- Charging infrastructure deployment
- Public transportation electrification
- Energy efficiency and Demand Side Management achievements
- Other key performance measures established by Government policy

11. Renewable Energy Registry

The website shall incorporate a Renewable Energy Registry that serves as a centralized repository of renewable energy deployment information across Bermuda.

The registry shall utilize data obtained from relevant Government departments, regulatory bodies, utilities, and other authorized sources, including renewable energy installation data maintained by the Department of Planning and other agencies.

The registry shall support:

- Solar photovoltaic installations
- Independent Power Producer projects
- Community solar developments

- Government renewable energy projects
- Renewable energy capacity by parish

The registry shall provide authorized Department personnel with administrative tools to review, manage, validate, analyze, and export data for policy development, reporting, and strategic planning purposes.

12. Bermuda Renewable Energy Heat Map and GIS Platform

The website shall incorporate an interactive Geographic Information System (GIS) platform and Renewable Energy Heat Map that visually displays renewable energy deployment across Bermuda.

The GIS platform shall utilize data from the Renewable Energy Registry and other approved datasets to provide:

- Island-wide solar photovoltaic heat maps
- Renewable energy density and penetration maps
- Parish-level renewable energy statistics
- Interactive mapping of solar installations
- Government renewable energy assets
- Community solar developments
- Battery energy storage systems
- Electric vehicle charging infrastructure
- Renewable energy capacity by geographic location

The platform shall allow users to filter, search, and visualize renewable energy assets through interactive mapping layers.

The heat map shall provide a visual representation of renewable energy adoption across Bermuda and support public education, policy analysis, and long-term energy planning.

Where relevant, the GIS platform should be designed to accommodate future satellite-derived datasets, earth observation information, climate resilience data, solar resource assessment tools, and geospatial analytics.

13. Education and Public Awareness Centre

The website shall serve as a primary educational resource for the public by providing information on:

- Energy efficiency
- Renewable energy technologies
- Sustainable transportation
- Responsible energy consumption
- Energy conservation
- Climate resilience
- Emerging energy technologies
- Telecommunications awareness
- Space, satellite and STEM education

Educational content should be suitable for primary school students, secondary school students, educators, homeowners, businesses, and community organizations.

The platform should support downloadable guides, fact sheets, infographics, presentations, videos, and other educational materials.

The Education Centre shall include a subsection on Space, Satellite and STEM Education. This subsection shall provide educational resources for students, educators and parents, including information on space camps, satellite technology, climate science, coding, alternative power sources, small satellite programmes, microgravity experiments, and space-related career pathways.

To avoid duplication, the Education Centre should focus on student, school, public education and workforce development content, while the main Space and Satellite section should focus on policy, regulation, investment, commercial opportunities and sector development.

14. Energy Bursary Programme

The website shall include a dedicated section for the Department's Energy Bursary Programme.

This section shall serve as the primary public information page for the programme and should provide clear, accessible information for students, parents, educators, applicants, award recipients, industry stakeholders, and members of the public.

The Energy Bursary Programme section should include information regarding:

- Programme objectives
- Purpose of the bursary programme
- Eligibility requirements
- Priority areas of study
- Application opening and closing dates
- Application procedures
- Required supporting documents
- Selection criteria
- Recipient obligations, where applicable
- Internship, mentorship, work shadow opportunities or work placement opportunities, where applicable
- Career pathways in the energy sector
- Frequently asked questions
- Contact information for programme enquires

Applications for the Energy Bursary Programme shall be submitted through the official Bermuda Scholarships application portal. The Department's website shall include a clear link directing applicants to the Bermuda Scholarships website for submission of applications.

The Department's website should not duplicate the full online application process unless required in a future phase. Instead, it should provide programme guidance, eligibility information, supporting documents, deadlines, public information, and links to the official application portal.

The section shall include a dedicated area for downloadable and accessible programme documents, including, where applicable:

- Programme guidelines
- Eligibility criteria
- Application instructions
- Required document checklist
- Terms and conditions
- Recipient obligations
- Frequently Asked Questions
- Promotional flyers or brochures
- Annual programme notices
- Any other official information documents relating to the programme

The section shall also include a dedicated **Energy Bursary Recipient Profiles** area to showcase current and past recipients, subject to appropriate consent and privacy requirements.

Recipient profiles may include:

- Recipient name
- Photograph, where consent has been provided
- Year of award
- Area of study
- Educational institution
- Career interests
- Short biography
- Recipient quote or testimonial
- Internship or work-placement experience, where applicable
- Career progression updates, where available
- Connection between the recipient's studies and Bermuda's energy transition objectives

The Recipient Profiles area should be easy for authorized Department staff to update through the content management system.

The section shall also include information on potential career pathways linked to the energy sector, including, where applicable:

- Renewable energy
- Electrical engineering
- Mechanical engineering
- Energy policy
- Energy regulation
- Environmental science
- Sustainability
- Climate resilience
- Project management
- Data analytics
- GIS and geospatial technologies

- Battery energy storage
- Electric vehicle infrastructure
- Energy efficiency
- Public sector energy planning
- Utility operations
- Emerging technologies

The Energy Bursary Programme section should be designed to support future expansion, including online forms, automated application status updates, recipient alumni features, internship matching, mentorship opportunities, and integration with scholarship or bursary application platforms, if required.

15. Energy Simulator and Mobile Application

The Department intends to develop an interactive energy simulator that will allow users to explore the impacts of energy consumption choices on electricity costs, renewable energy production, battery storage, and carbon emissions.

The simulator should be integrated into the website and designed for use by both students and members of the general public.

The platform should also provide a dedicated area to promote and support Department mobile applications through the provision of:

- Download links
- User guides
- Tutorials
- Release notes
- Frequently Asked Questions
- Customer support resources

16. Energy Innovation, and Emerging Technologies

The website should include a forward-looking section dedicated to innovation and emerging technologies within the energy sector.

This section should provide educational content relating to:

- Smart grids
- Battery energy storage systems
- Artificial intelligence applications
- Distributed energy resources
- Virtual power plants
- Demand response technologies
- Digital twins
- Advanced energy analytics
- Blockchain technologies and energy systems, where applicable
- Other emerging technologies relevant to Bermuda's energy transition

Where space, satellite, earth observation, or geospatial technologies support energy planning, climate resilience, solar resource assessment, infrastructure monitoring, or disaster preparedness, this section shall provide brief explanatory content and cross-link to the dedicated Space and Satellite section, the GIS platform, and the Open Data and Research Portal.

This approach is intended to avoid duplication and ensure that the main Space and Satellite section remains the primary location for space-sector policy, regulatory, commercial and consultation information.

Given growing public interest in digital assets and energy markets, consideration should also be given to educational content exploring the relationship between cryptocurrency, blockchain technologies, and energy systems.

This content should focus on public awareness, innovation, policy considerations, energy consumption, grid impacts, research and emerging technologies, and shall not constitute financial advice.

The section should be designed to help residents, students, businesses, policymakers and other stakeholders understand how emerging technologies may support Bermuda's energy transition, improve system resilience, enhance efficiency, support affordability, and inform future policy development.

This approach is intended to ensure that Section 16 remains focused on energy innovation and emerging technologies, while space, satellite and earth observation content remains within the dedicated Space and Satellite section, GIS platform and Open Data and Research Portal, where applicable.

17. Open Data and Research Portal

The website should support the publication of publicly available energy datasets, reports, research materials, and geospatial data.

The objective of this portal is to promote transparency, encourage research, and support evidence-based decision-making within Bermuda's energy, electronic communications, space and satellite sectors.

The platform should enable users to access and download datasets relating to:

- Electricity consumption
- Renewable energy generation
- Electric vehicle adoption
- Charging infrastructure
- Solar deployment
- Battery storage deployment
- Energy transition indicators
- Geospatial energy datasets
- Satellite derived datasets, where approved

- Earth observation information, where approved
- Climate resilience and infrastructure planning data, where approved

The architecture should be designed to accommodate future integration with open-data services, APIs, GIS platforms, satellite-derived datasets, earth observation services, climate resilience tools, solar resource assessment tools, and other approved datasets.

18. Technical Requirements

The website shall be developed using a modern Content Management System that enables authorized Department personnel to manage content independently.

The platform shall be:

- Fully responsive
- Mobile optimized
- Tablet compatible
- Scalable
- Secure
- Search engine optimized
- Easy to update by authorized Department staff

The website shall comply with WCAG 2.1 AA accessibility requirements and incorporate:

- Secure hosting
- SSL encryption
- Role-based permissions
- Routine security updates
- Backup and disaster recovery capabilities
- Accessibility compliant document publishing
- Searchable document repositories
- Secure online forms, where required

The design should reflect Government of Bermuda branding standards while maintaining a modern and engaging user experience.

19. Deliverables

The successful contractor shall be responsible for providing all services necessary to design, develop, test, deploy, and support the website.

Deliverables shall include:

- Information architecture
- Content strategy
- Wireframes
- User interface designs
- Website development
- CMS configuration
- Homepage design

- About the Department section
- Energy section
- Electronic Communications section
- Space and Satellite section
- Policies, Legislation and Publications repository
- Consultation section
- Upload and publication of the Space and Satellite consultation document
- Upload and publication of relevant legislation, policy documents, consultation papers and guidance materials
- Upload and organization of energy guides and public education materials
- Renewable Energy Registry implementation
- GIS platform implementation
- Dashboard development
- Education and Public Awareness Centre
- Energy Bursary Programme section
- Energy Simulator and Mobile Application section
- News and Media Centre
- Search functionality
- Accessibility review uploaded documents and web pages
- Testing and quality assurance
- Deployment
- Technical documentation
- CMS user training
- Post-launch support

20. Future Expansion

The website shall be designed with future growth in mind.

Potential future enhancements may include:

- Grant and bursary application portals
- Public consultation platforms
- Advanced GIS services
- Open-data APIs
- Smart meter integrations
- Renewable energy marketplaces
- Renewable energy asset management systems
- Satellite and earth observation integrations
- Solar resource assessment tools
- Climate resilience analytics
- Renewable energy forecasting tools
- Public-facing project trackers
- Utility and regulatory reporting integrations
- Electronic Communications service information
- Space and satellite sector enquiry forms
- Investor enquiry tools
- Additional digital government services

21. Acceptance Criteria

The project shall be deemed complete upon successful deployment of the website, completion of testing and quality assurance activities, verification of accessibility and security requirements, completion of user acceptance testing, provision of all required documentation, completion of training, and formal acceptance by the Department of Energy.

Acceptance shall also require confirmation that:

- The Space and Satellite section has been created.
- The Space and Satellite consultation document has been uploaded and linked appropriately.
- Relevant legislation and policy documents have been included in the publications repository.
- Consultation documents are searchable, downloadable and accessible.
- The Policy and Legislation Progress Tracker has been created, populated with initial content, tested for filtering and search functionality, and configured so authorized Department personnel can update stages, dates, approval status, completion status and related documents independently.
- The website clearly shows whether each relevant policy, consultation, Bill, regulation or legislative item is in development, under consultation, under review, approved, published, tabled, passed, commenced, in force, completed, closed, archived or superseded.
- Energy guides and public education materials have been uploaded.
- The Energy Bursary Programme section has been created, includes a clear link to the Bermuda Scholarships application portal, contains programme information and supporting documents, includes a dedicated area for recipient profiles, provides information on potential energy-sector career pathways, and is configured so authorized Department personnel can update the content independently.
- The Energy Innovation and Emerging Technologies section has been created, includes educational content on relevant emerging technologies, addresses blockchain and cryptocurrency-related energy considerations for public awareness and research purposes, and avoids duplication of space, satellite, GIS and open-data content housed elsewhere on the website.
- The website structure avoids unnecessary duplication between the Space and Satellite, Education, GIS, Open Data, and Emerging Technologies sections.
- Authorized Department personnel have been trained to update website content independently.
- The website complies with agreed accessibility, security, performance and usability requirements.
